

What is claimed is:

1. A pattern display apparatus comprising:
a rotary or stationary display member; and
a flexible organic EL device provided on an outer
surface of the rotary or stationary display member, the
flexible organic EL device being capable of displaying a
character, a figure, a mark and/or a pattern formed by
combining some of a character, a figure and a mark.

2. A pattern display apparatus according to
claim 1, wherein

the rotary display member rotates to display a
variable patterning and stops to display a still
patterning for a game machine.

3. A pattern display apparatus according to
claim 1, wherein

the stationary display device is for POP
advertisement.

4. A pattern display apparatus according to
claim 1, wherein

the flexible organic EL device has a laminated
structure formed by laminating at least a flexible base
layer, a first electrode layer, an EL layer, a second
electrode layer and a flexible sealing layer in that
order.

5. A pattern display apparatus according to
claim 4, wherein

an insulating layer of a predetermined pattern is
provided for insulating the first electrode layer and
the second electrode layer from each other in the
laminated structure.
